Principles of Scientific Writing

Last modified: 2026-10-19 00:51:29 (PDT)

Preface

This website presents my perspective on writing in science, technology, engineering, and mathematics (STEM), with a focus on writing about statistical data analysis. Most of its rules also apply to informative prose in general. I intend to give it to academic mentees as a style guide reference, and also use it as a notebook for myself.

The Introduction describes the book's scope and readers, and how to use its chapters. The Summary lists the book's main rules as a checklist for revising a draft.

Acknowledgments

The chapters are original. The site's build and CI tooling was copied from the UCD-SERG lab manual, which is a fork of the Benjamin-Chung Lab Manual. See also the qwt website template.
